
Russian 'Step Logic' Co. Considers Armenian It Potential Sufficient

ARKA - 28/3/2008

The Russian system integrator "Step Logic" company considers Armenia's IT potential quite sufficient, the President of "Step Logic" Co. Ltd. Yury Kantarovskiy told journalists in Yerevan.

He stressed the current active growth of investments in Armenian economy.

"We see how many major enterprises open their branches in Armenia.

Interest of the business in application of efficient high technology solutions is apparent. We sincerely hope to be able to help our partners and clients make their business most efficient and profitable and, through it, to take the leading positions in IT industry in Armenia," Kantarovskiy said.

In his turn, the Vice-President of "Step Logic" Yevgeniy Yuditskiy said that Armenian state agencies showed interest toward the services of the Russian company, but no certain agreements have been made yet. "We have great experience of work with state agencies in Russia and are ready to apply it in Armenia," he said.

He also pointed out that the services offered by the company are not expensive and "cost what they cost under severe competition circumstances". "Step Logic" is coming to Armenian market with a service-oriented approach, he said.

Yuditskiy also reported the company's intention to implement educational programs for young specialists in the country.

Preliminary agreements have been made with Yerevan State University and State Engineering University of Armenia. He said that manpower competition is quite severe, but "the company is not afraid of competition as it assesses the situation more soberly and as it is more solvent".

"Step Logic" Russian system integrator opened its regional office in Armenia - "Step Logic South" - on March 27.

Russian "Step Logic" company offers networking and system integration services and is the leader on the Russian information technologies market. The company's headoffice was opened in Moscow in 1992.

"Step Logic" is also an authorized partner of world's leading producers such as Alcatel, APC, Avaya, Cisco Systems, EMC, HP, Microsoft, Huawei, Nortel, Siemens and SUN.

The company is developing solutions based on a wide range of products - networking and channel-forming equipment, telephony and video conferencing

tools, call centres and IP-telephony, computers and server equipment, as well as bundled software for different purposes.
